EDUCATION

University of South Carolina

May 2025

BS in Computer Science

EXPERIENCE

LiminalArc

June 2025 - Current

Software Engineer & Consultant, Consumers Energy

Jackson, MI

- Helped lead Agile transformation of an engineering team, introducing sprint planning, standups, and retrospectives that improved delivery velocity and cross-team collaboration
- Drove adoption of TDD and SOLID principles across the team, increasing test coverage and reducing regression defects throughout the transformation
- Migrated a legacy Microsoft Access application to a full-stack web app using C#/ASP.NET and React/TypeScript/Next.js
- Deployed the application to Azure App Service with CI/CD pipelines, improving reliability and replacing a desktop-bound legacy system with a scalable cloud solution

Global Shop Solutions

May 2022 - Aug. 2024

Software Engineer Intern

Spring, TX

- Contributed to a COBOL to VB.NET UI modernization as part of a collaborative intern team, improving usability and long-term maintainability of a legacy business system
- Developed data access layer tests to validate a MySQL-to-PostgreSQL migration, ensuring data integrity and query compatibility across the transition
- Implemented a call history data display on an internal service team website, replacing manual log lookups with a centralized, web-based view of call records

PROJECTS

Portfolio Website

Aug. 2024 - Present

Frontend Developer

Personal

- Built and deployed a personal portfolio with Next.js and TypeScript, featuring work history, education, and a showcase of side projects
- Automated deployment via GitHub Actions CI/CD pipeline, ensuring the site stays live and up-to-date with zero manual effort
- **Technology:** Next.js, Typescript

BEACON of Hope - Machine Learning Meal Recommendation System

Aug. 2024 - May 2025

Systems Architect/Frontend Engineer

UofSC

- Architected and trained a machine learning recommendation model integrated into a full-stack web application to deliver personalized meal suggestions
- Built a responsive, user-friendly frontend using React/TypeScript and Tailwind CSS, consuming RESTful APIs to surface recommendations and user data
- Deployed and configured the application on AWS EC2, managing cloud infrastructure and environment setup for production hosting
- **Technology:** HTML/CSS/TypeScript, Python, React.ts, Tailwind, Django, Firebase, AWS EC2, Nginx, Gunicorn, Git

PDF Analysis RAG Pipeline

July 2026 - Present

Fullstack Engineer

Personal

- Built a full-stack RAG pipeline POC where users can upload PDFs and query document content
- Designed a responsive Next.js/TypeScript frontend for PDF uploads and a Python/ChromaDB backend to chunk, embed, and retrieve semantically relevant content fed into a locally hosted Ollama LLM
- **Technology:** Python, Typescript, Next.js, Ollama API, ChromaDB

SKILLS

Languages: Typescript, C#, VB .NET, Java, Python, C++ , C, HTML/CSS/JavaScript, R, MySQL, PostgreSQL, Bash

Tech./Frameworks: Next.js, .NET Framework, Entity Framework, Azure Pipelines, Git, UNIX/Linux, AWS Cloud
